

Data Solutions Architect

Reports to: Head of Solutions Architecture

Department: IT

Location: Near Liverpool

The ideal candidate

This assignment is suited to someone looking for a complex and delivery-focussed environment, with lots of moving parts.

You will be an experienced Data Solutions Architect / Data Architect and will be required to quickly understand the client's current data models, data strategy and data integration on a high-profile programme.

Whilst you'll have a technical skill-set you will be competent working closely with a variety of cross-functional stakeholders and will have experience working in or with Agile squads.

The successful candidate will have...

- Experience in retail, consumer lending and/or consumer banking would be preferred
- A track record as Data Architect/Data Solutions Architect with experience in areas like:
 - Data modelling/Database design
 - Data Governance and Management
 - Big Data & Associated Technologies (Hadoop, Hive, Spark etc.)
 - ETL Design and Development
 - Data Warehousing
 - Analytics, BI and reporting tools (such as OBIEE/SAS)
- The ability to manage stakeholders and build successful working relationships across business and IT as an internal consultant
- The ability to manage a demanding workload, prioritising and delivering results
- Experience working effectively with 3rd party suppliers
- Experience in the following areas is advantageous:
 - Oracle Essbase and OBIEE
 - Teradata
 - Oracle Cloud for Retail, Finance and HR (vanilla data models, and reporting – OTBI, Oracle Analytics Cloud)

More Information

£600 - £625 per day

Minimum duration 6 months
