

SOLUTIONS ARCHITECT (Permanent)

The Opportunity at a glance...

Our client has an outstanding track record of customer success and is a market leader for customer retention and satisfaction within their domain. They put a lot of this customer happiness down to colleague happiness – they have featured repeatedly in the Sunday Times UK's Top 100 Best Companies.

This mid-sized firm (700 FTE) has grown both organically and more recently through synergistic acquisitions, and now, with the backing of a progressive Private Equity partner, they are preparing for their next phase of growth. The PE partner has recognised the potential for technology enabled change and is hugely supportive of digital innovation.

Central to this change is the creation of a strategic technology roadmap that underpins the growth ambitions and helps create an efficient and joined-up IT estate.

The Solutions Architect play a major role in this activity. You will operate at the most senior levels within the business, helping functional leaders to realise the true value of technology, and providing end-to-end solution designs for business system projects.

Role Highlights

- An opportunity to work closely with the CIO, in a flat organisation structure, which means lots of autonomy, the ability to influence, and access to decision makers.
- A successful organisation that is growing and increasing its market share, enabled by technology.
- A vibrant work environment in an excellent Cheshire location.

About You

- A track record as a Solutions Architect, in a business-focused role – so an excellent grasp of business processes and valuable business outcomes, as opposed to being purely technology focused.
- An excellent presence with business stakeholders – the ability to communicate effectively, really listen and understand what value means to them
- A delivery track record and demonstrable experience of successfully helping projects to move through people and process bottlenecks.
- You might be a Solutions Architect with experience of Enterprise and/or Business Architecture, or vice-versa, with the ability to delve into lower-level detail when required.

Basic £65 - £80K + excellent benefits

Location: Cheshire
