

Senior Solutions Architect – Microservices / API

Reports to: Head of Solutions Architecture

Department: IT

Location: Near Liverpool

The ideal candidate

This assignment is suited to someone looking for a complex and delivery-focussed environment, with lots of moving parts.

Supporting and guiding several squads, your role will be to help rearchitect the client's core ecommerce platform, moving from Oracle ATG to adopt a microservices approach, including building proprietary API capability.

You will be an experienced Solutions Architect and will be required to quickly understand the client's current architecture and customer facing technology.

Whilst you'll have a technical skill-set you will be competent working closely with a variety of cross-functional stakeholders and will have considerable experience guiding Agile squads an architectural lead.

The successful candidate will have...

- Experience in retail/ecommerce, consumer lending and/or consumer banking would be preferred (but not essential)
- Experience taking a large, licensed platform and rearchitecting/decomposing into microservices
- Experience guiding squads to ensure key architectural decisions are considered
- Experience working with AWS (ideally) or other major cloud technologies like Azure or Google
- The ability to manage stakeholders and build successful working relationships across business and IT as an internal consultant
- The ability to manage a demanding workload, prioritising and delivering results
